Profile

AI Systems Engineer focused on building intelligent, data-driven systems across Machine Learning, Data Science, Computer Vision, NLP, and Automation. Experienced in taking problems from data preparation and analysis through model development, software integration, and automated workflows, with a strong focus on practical, reliable solutions. Combines AI/ML knowledge with software engineering and data intelligence to build systems that move beyond individual models toward complete, usable products.

Experience

AI Automation Trainee, Digital Egypt Pioneers Initiative (DEPI) - Build AI-powered workflows with n8n, integrating AI services, APIs, and external applications. - Develop solutions around AI agents, RAG, prompt engineering, and intelligent workflow automation.	08/2026 – 12/2026 Nasr City, Cairo
Data Analysis Trainee, DoLab Academy - Analyzed business datasets using Python/Pandas and statistical methods, with automated data preparation and exploratory analysis. - Built Power BI dashboards translating analytical findings into business-facing insights.	01/2026 – 04/2026 Alexandria, Egypt
Software Engineering Internship, Fuzetek Contributed to software development using C#, OOP, Git, and clean architecture within Agile projects.	07/2025 – 09/2025 Fifth Settlement, Cairo
AI & ML Trainee, Association of Management and Information Technology (AMIT) Developed ML/deep-learning solutions across Computer Vision and NLP using Python, TensorFlow, and scikit-learn.	07/2023 – 03/2024 Nasr City, Cairo

Education

Bachelor of Computer Science, <i>October University for Modern Sciences and Arts (MSA)</i>	10/2022 – 06/2026
Bachelor of Computer Science, University of Greenwich	10/2022 – 06/2026

Skills

Artificial Intelligence & Machine Learning

PyTorch, TensorFlow, scikit-learn, Computer Vision, NLP, FaceNet, Embeddings

Data & BI

Pandas, NumPy, Power BI, Matplotlib, Plotly

Software Engineering

Python, C++, C#, JavaScript, FastAPI, Docker, Git

Automation & AI Systems

n8n, AI Agents, RAG, API Integration, Workflow Automation

Projects

AI Pharaoh, Graduation Project

- Developed an AI-powered system for Egyptian heritage recognition, identifying and analyzing hieroglyphs, statues, and monuments.
- Combined Computer Vision and NLP to recognize hieroglyphs and translate them into meaningful textual representations.
- Tools: Python, Computer Vision, NLP, Deep Learning
- GitHub: <https://github.com/Arasoul/AI-Pharaoh>

Healthcare Machine Learning API

- Developed a production-ready ML API using FastAPI for reliable healthcare prediction workflows.
- Implemented data validation, preprocessing, inference, and Docker-based deployment for scalable integration.
- Tools: Python, FastAPI, scikit-learn, Docker
- GitHub: <https://github.com/Arasoul/healthcare-ml-api>

Semantic Movie Recommendation System

- Developed a semantic movie recommendation system using NLP embeddings and similarity-based retrieval.
- Implemented vector search to use relevant recommendations across large movie datasets.
- Tools: Python, NLP, Embeddings, Vector Search
- GitHub: <https://github.com/Arasoul/movie-recommendation-vector-search>

Data Intelligence Ecosystem — DataPrepToolkit | AutoEDA | AutoAnalytics | AutoBI

- Built a deterministic data-to-dashboard ecosystem automating data preparation, EDA, statistical analysis, and semantic BI generation.
- Designed modular handoff contracts across the pipeline, enabling reproducible analytics without LLM/API dependencies.
- Tools: Python, Pandas, NumPy, Matplotlib, DataPrepToolkit, AutoEDA, AutoAnalytics, AutoBI

Courses and Certificates

Machine Learning & Deep Learning, Zewail City of Science and Technology

Advanced training in machine learning algorithms, deep neural networks, model optimization, and hands-on TensorFlow implementation.

Neural Networks and Deep Learning, Coursera

Covered the fundamentals of neural networks and deep learning, including model training, optimization, and practical implementation.

Deep Learning for Computer Vision, Udemy

Applied deep learning techniques for image classification, object detection, and other computer vision tasks.

Artificial Intelligence, The British University in Egypt

Covered fundamental AI concepts, intelligent systems, AI-based problem solving, and ethical considerations in artificial intelligence.

Artificial Intelligence Ambassadors Program, Engineers For Sustainable Egypt and NTI

Developed leadership and communication skills while promoting AI education and community engagement.

HCIA Big Data V3.5, MSA Continuing Learning Center (CLC)

Covered data fundamentals, the Hadoop ecosystem, Hive, MapReduce, and distributed data storage technologies.
